

Intestinal tract's freaks or irritable bowel syndrome.

*All diseases start
in the intestinal tract.*

Hippocrates

Each "disease" has its own sense. Everything [depends](#) on the state's quality of human gut microbiome, i.e.: an uninterrupted functioning of immune system, the preen and health physical condition in general, and even ... the selection of partner in life.

Beyond a doubt /IBS/ is one of the most horrid human distresses, and microbes play a [leading role](#) in it.

"Authoritative" men keep in the dark from medicine the causes of gluten-sensitive enteropathy and type 1 [diabetes](#) mellitus as well, which affects the cells of pancreatic and disrupts the production of such hormone as insulin.

Free of insulin glucose, entering into blood from regular sugar contained in candy and sweets or from such carbohydrates as pasta and bread, cannot be laminated and absorbed. It /*glucoses* / has been accumulated in such quantity that becomes a toxic.

Wheat bread and its products are (almost 100%) consisting of synthetic vitamins and amylum, which are dangerous for human body, including their wheatpaste masses forming and such flour-bleaching chemicals substances as: benzoyl peroxide, chlorine dioxide², which "improves" the properties of flour / its bleaching /, as well as many other not the most "appetizing" ingredients containing dangerous chemicals, synthetic vitamins and gluten.

Wheat flour products are one of the investigative reasons of why pathological lesion of microbiome [balance](#) occurs in the human body.

Consequently, antibiotics and infections are not the only one driving forces of dysbacteriosis, which destroy the balance of [primary balance](#) between the gut microbiome organisms.

A piece of good news lies in the fact that acquired #bowel dysbacteriosis can be reactivated when consuming a biological immunomodulator [OMARIDIN™](#) and a healthy bacterial population can be recovered as well.

[The causes of bowel dysbacteriosis](#)
